- ☐ 1. An antenna system 10 to 12 meters high, was near the "Bahnlager", in the camp at the railroad line, in Eberswalde (N 53/V 08) on 3 May 1950. The traced antenna mast was fitted with a steel tube frame with a joint which made the lateral antenna grids rotatable. A long rod with a number of cross rods was at the top and bottom of the steel tube frame.

- ☐ 2. The camp in Rudolf-Breitscheidt-Strasse in Eberswalde was occupied by Soviet soldiers on 18 May 1950. The sentry at the gate wore red-bordered black epaulets. A radar set about 10 meters high was in the western corner of the camp. The radar was not observed rotating and was directed toward the north and south. A radio truck with a wooden antenna mast about 12 meters high and a single antenna was near the street behind the fence.\*

\* ☐ Comment. The data refer to the same radar set. The presence of this set was previously reported and may thus be considered confirmed.

☐ rough sketch of the set ☐ showed that it is the same as the previously sketched set.

☐ It is not clear whether it is operated by an air force unit, possibly the headquarters units of the fighter division stationed in Eberswalde-Finow. This assumption is, however, not supported by the fact that the camp where the set is located is guarded by army soldiers.
